

DECATUR HEALTH IMAGING, LLC
P·E·T CENTER

Providing For Tomorrow's Health Care, Today

About Us (Decatur Health Imaging)

Decatur Health Imaging, L.L.C. provides state of the art fixed Positron Emission Tomography (“PET”) non invasive diagnostic imaging in support of cardiac, oncology, and neurological services. The center began operations October 2004 and is accredited by the American College of Radiology (ACR) for oncology, neurological disorders, and cardiac. Our commitment to provide “state of the art” image quality and reliability to our patients is exemplified by the fact that we were one of the first centers in the state of Alabama to be accredited in all three system scans and provide [Rubidium-based cardiac PET imaging](#).

We insure the finest image quality and diagnostic accuracy:

- The scanner ([Positron mPower](#)) is designed to produce high quality PET imaging for oncology, neurology, and cardiac patients via high sensitivity, resolution, and count rate. Now, [PET](#) diagnoses heart disease with 96-98% accuracy in individuals with or without symptoms of heart disease, permitting treatment even before symptoms appear.
- We have experienced Certified Nuclear Medicine technologists with advanced training in cardiac testing and Advanced Cardiac Life Support (ACLS) Certification.
- Our radiologists are specifically trained and experienced in the interpretation of PET reports , and
- We have the latest software (including [NeuroQ](#) – the most innovative PET brain quantification software available in the industry)

Simply stated we meet and will continue to meet the highest standards for quality in the industry.

For more information, please call the PET Center (256-350-6364).
